

The Compost Kitchen

A 1 litre plant pot contains 1000ml of growing media when full.

Take a beaker and use the 'ingredients' in the room to mix together 1000ml of the perfect growing media. Each beaker has a 200ml line drawn on it. Fill the beaker to this line when measuring out the ingredients.

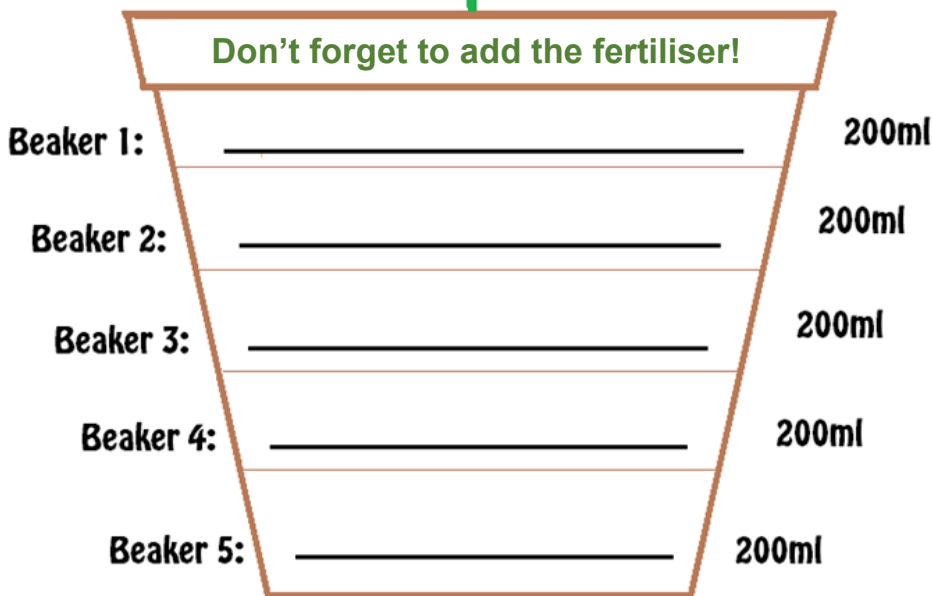

Once you have mixed together your chosen ingredients (including fertiliser), write them down before you forget!

What will your 1000ml growing media mix be made up of?

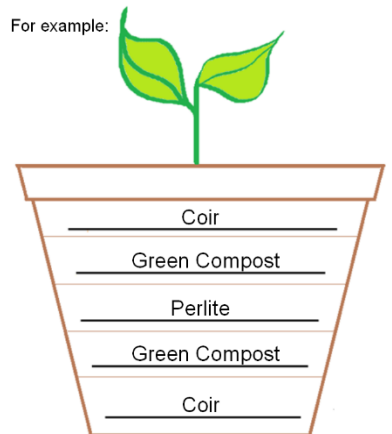

Ingredients to choose from:

Coir ~ Green Compost ~ Pine Bark ~ Perlite

You don't have to use every ingredient but you will need to add fertiliser to the mix!

For example:

Why have you chosen this mix of ingredients?
